## FIBERGLASS INSULATED RESCUE HOOK

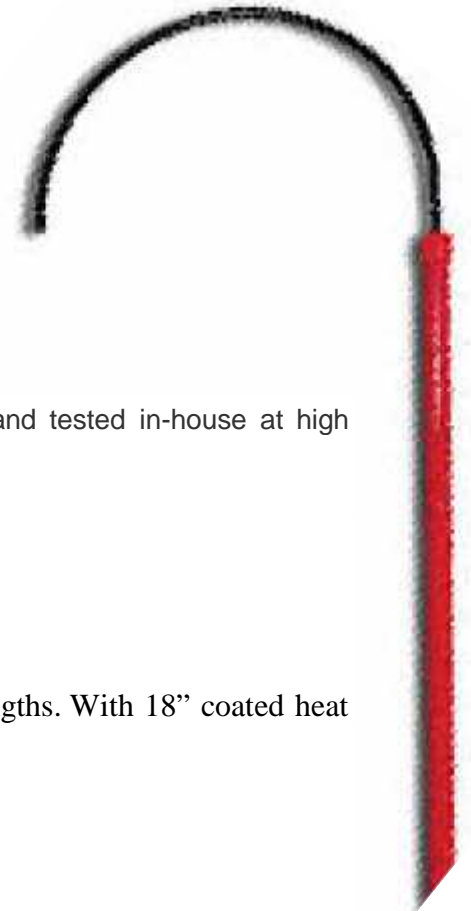

**FIBRE CRAFT INDUSTRIES** [introduces insulated rescue hook for emergency rescue of electric live lines & injured personnel!](#)

Sticks feature a coated heat treated steel body hook. Wall thickness has been engineered to provide the utmost in mechanical strength and to meet the rigorous use pushing, pulling, twisting and removal of personnel from electric live line or conductive areas. Featuring a foam filled fiberglass reinforced handle for superior electrical insulation and foremost features. The sticks can be used in switching yards with system voltages ranging from 3.3kv up until 132kv, whereby the sticks' solid foam section is fully insulated and tested at every 1ft length at high voltage to give the ultimate live line protection for human beings.

- Non-conductive handles constructed from the finest fiberglass materials and tested in-house at high voltage.
- Compliance ASTM F-711.
- High strength steel hook.
- Easy-to-locate bright red colored Fiberglass handle.
- Available lengths; 6 feet, 12 feet & customized lengths also available.

Insulated rescue sticks or hooks are available with 6ft and 12ft handle lengths. With 18" coated heat treated steel body hook.
